ROD Gold KDS Hospitality Suite Software

The Remote Order Display (ROD) Hospitality Suite software is the result of years of development to integrate the most desired features for KDS into one highly efficient and versatile package at a shockingly affordable price. Complete with management & maintenance utilities, there is no better software suite available to complement SEC KDS systems using our iPad, NGEN166, and NGEN800 controllers. For the wide spectrum of hospitality environments, the ROD Gold brings kitchen automation to peak performance.

The ROD GOLD installs on a PC Server or POS Register. It quickly identifies the KDS remote video units. The Management Window is a convenient tool for updating software and program information. In addition, a pull up resizable window will display instantaneous orders and activity currently at any remote kitchen display monitor. Automatic fault tolerance and redundancy features ensure your system is prepared for peak performance and backup routing

The Maintenance Utility provides quick KDS screen format selection. With the Register Emulator Utility, generating sample transaction orders gives you instantaneous system throughput testing during installation.

Order screens are simplified using graphical icons, images, and larger fonts for ease of viewing. Customize your background colors, font size and colors, and order box grids.

The summary screen highlights all pending order items for kitchen preparation.

A pull down HELP directory gains quick access to valuable food preparation instructions, graphics images, or other look-up services.

With live on-line production statistics reporting, managers can assess worker efficiency and performance improvement areas.

Orders queues scroll left and right of the screen, accessible using the ARROW keys. Recalled orders also available for instant viewing.

The ROD Gold is ready for outdoor drive thru customer order displays. Customized welcome screens, menus, and order presentation using color fonts, backgrounds, graphics, ads, etc., are quickly on-line with our easy interface capabilities.

A sampling of other features includes:

- Touch screen operation
- Programmable order routing periods
- Food prep, expediter, drive thru, and spanning display modes
- Various order beep modes
- Programmable order bump modes
- Order item consolidation
- Tax & Total customer display for drive through window
- Drive thru lane efficiency display
